PATENT
Docket: CU-2651

Amendments to the Specification

Please replace the first paragraph at line 6 on page 5 with the following amended paragraph:

Furthermore, the device 2 is provided with an inner side portion 5 which in the embodiment shown consists of a lighter and more flexible textile material than the belt 3 and which is sewn or in another suitable way is attached to the belt 3 along one of its longitudinal edges. The inner side portion may on its inside advantageously be provided with a low friction coating, preferably ~~silicon~~ silicone polymer, butadiene rubber, neoprene rubber, PVC or similar polymer. Such a low friction coating makes it easier to fit the device 2 in place on the wheel 1 during the mounting.
